

DELENEX A BOX+C

Dishwasher polisher for medium hard
waters
Super concentrate BOX+C system

CHARACTERISTICS

DELENEX A BOX+C is used in the polishing of dishes, glassware and cutlery in bars, restaurants, dining rooms, hotels, etc.

It is an additive for the rinse water at the end of the washing process, which due to its extraordinary concentration of active matter is dosed in small doses, facilitating the drying and polishing of the washed parts.

Its active ingredients reduce the surface tension of water, causing a uniform film to form on washed objects, allowing it to drain without leaving marks or veils on the surface and achieving a very fast drying time.

HOW TO USE

Connect the container directly to the dispenser of the circuit of rinsing of the dishwasher, to a temperature of 80-90 °C.

Dose it at 0,1-0,2 ml/l, increasing the dosage proportionally to the hardness of the water.

PHYSICAL AND CHEMICAL PROPERTIES

Appearance	Transparent liquid
Colour	Blue
Odour	Characteristic
pH (1 %)	7,35
Density (20 °C)	1000 kg/m ³
Water solubility	Soluble in water

PRESENTATION

Box with 10 liter bag

PRECAUTION

Supplementary information: EUH210: Safety data sheet available on request. Before using the product, read the label carefully. Do not ingest. In case of accident, consult to the Medical Service of Toxicological Information Tel. 0034 915 620 420.

ADDITIONAL INFORMATION

While the above information is correct to our criteria, as the conditions of use of the product are beyond our control, we disclaim any responsibility for incorrect use of the product.
