

KLARAN FLOCULANTE

Swimming pool coagulant and precipitating

CHARACTERISTICS

Concentrated product, formulated as a flocculant of swimming pools water. It removes and deposits suspended matter in water that does not hold the debugger filter, clarifying the water with a pleasant and bluish appearance. It does not change the water pH in the pool. It's a primary flocculant, total or partial substitute of others, such as iron salts, etc.

HOW TO USE

In the case of water turbidity in the pool, dilute 500-1000 ml of FLOCCULANT in 6 or 8 liters of water for each 50000 liters and distribute this dissolution, as homogeneous as possible, on the surface of the pool water. Let the product act with the water at rest, for a minimum of 60 minutes until the turbidity disappears and then pass the cleaner, picking up all matter deposited in the bottom.

PHYSICAL AND CHEMICAL PROPERTIES

Appearance	Liquid
Colour	Colourless
Odour	Odourless
pH (10%)	6.6
Density (20°C)	1010 kg/m ³
Solubility	Soluble in water

PRESENTATION

10 and 20 litres containers

PRECAUTIONS

Supplementary information: EUH210: Safety data sheet available on request. Do not ingest. Keep out of the reach of children. In case of accident, consult to the Medical Service of Toxicological Information Tel. 0034 915 620 420.

ADDITIONAL INFORMATION

While the above information is correct to our criteria, as the conditions of use of the product are beyond our control, we disclaim any responsibility for incorrect use of the product.
